**bioArcus**<sup>®</sup> Ltd.

**...controlling the odor emissions...**

## Technologies/methods for removing of malodors offered by bioArcus<sup>®</sup>

- **ANTI-ODOR BARRIER** - innovative attitude for elimination of malodor emission - has significant advantage in comparison to traditional deodorization. The concept derives from the possibility of using adequate chemical components capable to stop and block malodor molecules. This can be ensured only by using adequate spraying systems working at high/low pressures and allow for obtaining of the - so called - "fog" which consisting of natural anti-odor products in water solution .
- **BIOLOGICAL AND CHEMICAL PRODUCTS APPLIED TO SEWAGE, SEWAGE SLUDGE OR SPRAYED DIRECTLY ONTO SURFACES**
- **BIOFILTERS**

## Our installations, adapted to particular client's demands, working in:

- refinery industry,
- pumping stations,
- chemical, paper and food industries,
- waste treatment plants,
- waste water treatment plants,
- composting plants,
- landfills,

and other places like restaurants, hospitals, hotels etc.

## BARIERY ANTYODOROWE

Offered anti-odor products (about 20 different types), do not contain any toxic compounds for people, animals or plants and do not formulate any harmful by-products.

Our products are absolutely safe and friendly for environment

## ADVENTAGES

### ANTI-ODOR BARRIER

- immediate elimination or significant decrease of malodor emission,
- significant limitation of micro-pollutants/allergens emission's range,
- device can be activated/run according to necessity,
- device can be transferred relatively easy,
- device can be quickly installed (there is no necessary to obtain any construction permits),
- reliable/efficient service and consulting,
- low cost of installation and exploitation.

## CONTAINMENT

## BIOFILTERS

...to sewage manholes

...to vent sockets

of pumping stations

...to WWTP
